

## Technology Committee Report October 2006

Team met for the first time Monday October 9th. We did a round robin of introductions and team members shared why they joined the committee. We then reviewed and discussed the MCPS Technology objectives, our work plan and advocacy issues. The team agreed that the scope of the plan was very aggressive for the first year and as a team we agreed to focus on the top two issues, which were identified as; improving school website designs and content and re-engineering the technology curriculum from elementary through high school. We then divided into two subgroups, each dedicated to one of the aforementioned issues. We discussed what the expected output would be by team and then agreed to meet again on November 13th @ 7:30 in Carver.
